

## 2020 Texas Custom Rates Survey

**Corrie Bowen**  
**County Extension Agent**  
**Wharton County**

The Texas A&M AgriLife Extension Service, Department of Agricultural Economics is conducting the 2020 Texas Custom Rates Survey. Each year our offices receive many requests for current custom rate information and the latest Custom Rates Publication. The survey and publication are the only source to find the going rates paid for these types of services. Questions in the survey include rates paid/charged for tractor rental, tillage operations, planting operations, chemical and fertilizer application, custom harvesting, hay baling, land preparation, brush control, and other miscellaneous operations or services. If you have knowledge of rates in your area, and appreciate the value of publishing this type of market information, please consider participating in the survey which can be found online at: <http://agecoext.tamu.edu/crs2020> The survey will ask that you only complete the questions that pertain to your operation, therefore most people should be able to complete the survey in 10-15 minutes or less. Hard copies of the survey will be mailed to a limited group, however anyone with knowledge of custom farm and ranch operations is encouraged to participate. We need broad participation to produce an accurate and reliable publication of this market information. The survey will be open from February through the end of April. Your participation will help make sure the published information is the most accurate and reliable possible. If you have any questions regarding the survey please contact Dr. Steven Klose ([sklose@tamu.edu](mailto:sklose@tamu.edu)). To give you an idea of what information the Custom Rates Survey includes, I've attached the Custom Rates Survey from 2018. I've found this survey to be very helpful in answering clients' questions.

# 2018 Texas Agricultural Custom Rates

## Introduction

The data presented in this publication represent the responses of a survey conducted from April through July of 2018 by the Texas A&M AgriLife Extension Service, Department of Agricultural Economics. Survey respondents include both providers and users of custom services, and data reflect the prices paid for typical farm and ranch custom operations. Survey sampling and methodology were changed in 2011. Prior Texas Custom Rate Statistics Reports may not be directly comparable to reports of 2011 and after.

The survey data and publication include rates for tractor rental, row crop field operations, harvesting, hay baling, various land improvements, and livestock services. Inclusions and exclusions are noted in each section, but typically materials are not included in the rates listed. For each rate, five statistics are reported: number of responses, average rate, minimum, maximum, and most common. For rates where no common responses are recorded, the most common statistic will indicate N/A. Some custom rates are charged based on a set of factors rather than a single rate. For example, wheat harvesting may be priced at a rate/acre + rate/bushel + overage charge for yield over a specified level. For these combination rates, we simply report the statistics of each individual factor.

Reliability of rates and statistics reported are highly dependent on the number of responses in each category. Categories were left blank if fewer than three useable responses were collected. Data are presented on a regional and statewide level only. Geographic regions (North, East, West, and South) are based on combinations of administrative districts of the Texas A&M AgriLife Extension Service.

The survey coordinating team extends its gratitude to the survey respondents that took the time to complete and return the survey, as well as the AgriLife Extension County Agents and Specialists that supported the survey process.

## 2018 Texas Agricultural Custom Rates

### Survey Methodology

The 2018 Texas Agricultural Custom Rates Survey was developed to provide information regarding typical prices paid/charged for custom agricultural services or operations.

The sampling of agricultural custom service providers and users was developed with the assistance of the entire Texas A&M AgriLife Extension Service network across the State. On a county by county basis individuals were selected for their anticipated knowledge of custom rates in the area and/or participation in past surveys. A total of 1134 individuals covering 223 counties were invited to participate. A combination of traditional mailed surveys (946) and email only invitations (188) was used. A reminder postcard was sent two weeks after the first mailing. A second survey was mailed a month after the first to individuals that had not responded initially. Email reminders and invitations accompanied each physical mailing where email addresses were available. Participants were asked to voluntarily provide information on only the custom rates with which they were familiar. Valid responses were received from 20.8% (236) of the original 1134 sample. Of the 236 responses, 44 provided a response online.

In addition to the mailed survey sample, an online version was available and published through a variety of sources inviting public participation. Valid survey responses were collected online from 94 individuals not connected to the original sample.

A total of 330 usable responses were collected and analyzed for publication. Prior to publication, the survey data was reviewed and a minimal number of responses were eliminated to avoid unreasonable price ranges.

### 2018 Texas Agricultural Custom Rates, Sample and Response by Region

	Sample	Usable Response		Response Rate	Public Internet Response	Total Usable Response
		Paper	Internet			
<b>North</b>	298	42	8	16.8%	15	65
